

**AutoIVR™** presents the doctor/client with an ideal solution for telephonic specimen monitoring, along with telephonic result retrieval, which significantly lowers laboratory costs.

**AutoIVR™** serves as an automatic answering system, which functions as an integral part of the **AutoLims™** distribution infrastructure.

**AutoIVR™** allows doctors/clients to place a call at any time, from any place, punch-in an ID number (or a PIN) and retrieve test results, specimen lists and certain reports, such as an Abnormal Test Results report.

The system supports multi-line exchanges, thus avoiding busy line signal.

The system is fully automatic and runs in the background on the server. Results are received by AutoIVR™ directly from the **AutoLims™** system and are then retrieved directly by doctors/clients, with no need for any intervention on the laboratory personnel's side. **AutoIVR™** is therefore able to reduce a laboratory's costs while improving accessibility to information for the doctor/client.

## FEATURES

- Telephonic availability of laboratory results 24/7.
- Integrated with AutoLims.
- Results available from anywhere/anytime.

## BENEFITS

- Results available when physician/client may want them.
- Better service to physicians/clients.
- Reduce laboratory costs.

State - of - the - art Laboratory Information System from NeTLIMS
